

Dragon Slayer

*Designed by Lt. Alan Williams,
Seminole County Fire/Rescue, Florida*

*Special high quality rust
and corrosion resistant blade*

Designed by a fire fighter for fire fighters.

The **DRAGON SLAYER™** with its knife edged purchase point, penetrates sheet rock, plaster/lathe and sheet metal construction with ease! The unique rip teeth removes square yards of ceiling and wall building materials more quickly and safely than conventional hooks and pike poles. Easily penetrates and opens sheet metal found on mobile homes, warehouses, RVs, trailers and busses.

The Dragon Slayer is excellent for removing windshields and does it with a high degree of safety with less risk of trauma to the patient during the extrication. This radical new tool offers the fire service one multitask tool that is superior in design and function to all previous hooks and overhaul tools.

Dragon Slayer

- Special high quality steel blade and sleeve
- Tempered and Oil Quenched for best edge-holding and toughness
- Rust and corrosion resistant
- Bonded with epoxy to Nupla fiberglass pole.

Nupla Fiberglass Pole

- Electrically non-conductive
- Non-corrosive and stronger than wood
- Resist cracks, warping mildew, rotting and UV deterioration
