Warthog Ventilation Blade

The aggressive tooth design of the Warthog™ blade quickly and easily cuts through roofing materials, wood flooring and siding. Heavy-duty construction helps prevent tip loss, the major problem with standard carbide tip saw blades. Each oversized carbide tip is mounted to the blade using our special process. This process cushions the tip mounting and makes our blade the most durable (and probably the last) ventilation saw blade you will ever buy.

It Doesn't Bind

Our aggressive tip angle means all you have to do is feed the blade into the surface being cut and it does the rest.

It Increases Safety

Your ventilation crew will spend less time and effort to cut holes.

It Doesn't Clog

Even when cutting through multiple layers of roofing paper and tar, our deep tooth design deposits cut materials outside of the blade guard.

It Lasts Like No Other

Our heavy-duty tips are a full 3/8" wide and 5/8" tall. Tip loss is a problem of the past.

The Next Time You Send Your Roof Crew Above The Fire – Send A Warthog With Them!
